

## Biological Summer Disease "Pythium" trial Hydroponic Cucumbers NSW AG DR L Teseriro 2003

- Cucumbers were hydroponically grown in treatment ① it was a disease free environment. Both the Trichoderma & Companion treated cucumbers attained the highest final weights in grams. No areas suffered mortality loss.
- Treatment ② - the disease 'Pythium' was introduced, control area suffered high mortality loss and a 20% reduction in final weights.
- Trichoderma area, when 'Pythium' was introduced the mortality loss was major (25% loss), with a very significant 31% loss in weight.
- Companion GB03 treated area, when 'Pythium' was introduced the mortality loss was the least of any area with only an 8% loss. The Final weights were the greatest with an increase over the Control x 39% and increase over Trichoderma treated area by 49%.
