## First for DrumMUSTER

SprayGro Liquid Fertilizers has recently incorporated DrumMUSTER into their range of over 60 crop nutrient products, and in doing so they are the first liquid fertilizer company to be part of the hugely successful DrumMUSTER program.

Plastic drums are an excellent form of packaging for liquids, in that they present and travel well. They are flexible and sturdy but they don't breakdown. The farming community need a solution to the disposal of this empty packaging without them just ending up in landfill and municipal tips.

Market Development Manager of SprayGro Liquid Fertilizers, Mr Simon Blackwood, said that "we decided to be proactive on this

very important environmental issue, although our product range does not fall under the 'have to' category for DrumMUSTER like pesticides do, the DrumMUSTER Program provides a safe cost effective solution to the disposal of empty fertilizer containers. We expect this will have tremendous appeal to growers, especially as amnesty will end soon at DrumMUSTER collection depots on all non DrumMUSTER eligible containers."

National Program Manager for DrumMUSTER, Mr Vernon Keighley, commended SprayGro Liquid Fertilizers "for their forward thinking environmental initiative" and stated "Since introducing the DrumMUSTER program in 1999, over 4 million plastics and steel

drums have been recycled into making a whole range of products such as outdoor furniture, wheelie bins, road signs posts, irrigation pipes etc. This not only means landfill is being minimised but the production of new plastics and metals is also greatly reduced."

To do your part for the environment, whilst optimizing crop nutrition contact:
